# Gradient Separation of Guanine and Acyclovir on ACQUITY UPLC BEH HILIC

Waters Corporation

This is an Application Brief and does not contain a detailed Experimental section.

#### Abstract

Thia application note demonstrates the gradient separation of guanine and acyclovir on ACQUITY UPLC BEH HILIC Columns.

### Introduction

The compounds used in this study are:

- 1. Acyclovir
- 2. Guanine

### Experimental

#### **Test Conditions**

| Column:                             | ACQUITY UPLC BEH HILIC, 2.1 x 100 mm, 1.7 $\mu\text{m}$ |
|-------------------------------------|---|
| Part Number:                        | 186003461   |
| Mobile Phase A:                     | 0.2% HCOOH in H <sub>2</sub> O                          |
| Mobile Phase B:                     | 0.2% HCOOH in ACN                                       |
| Flow Rate:                          | 0.556 mL/min  |
| Isocratic Mobile Phase Composition: | 8% A; 92% B   |
| Injection Volume:                   | 0.4 µL  |
| Sample Concentration:               | 83 µg/mL  |
| Sample Diluent:                     | 0.02 N NaOH in 60:40 ACN:H <sub>2</sub> O               |
| Temperature:                        | 65 °C   |
| Detection:                          | UV @ 254 nm   |
| Sampling Rate:                      | 20 pts/sec  |
| Time Constant:                      | 0.1   |
| Instrument:                         | Waters ACQUITY UPLC with ACQUITY TUV                    |
